

Life Science Grade 2 Evaluation

Student Worksheet

(Teacher: You'll need to go over the instructions with the kids and work with them on this part.)

Overview: You're going to show your teacher how much of this science stuff you already know. Choose one of the following activities:

- a. Make up a short story about your favorite plant or animal, and include information about why and how it's your favorite. You can act it out if you want to with costumes and everything.
- b. Design a garden and label its parts on a poster, including the various life stages of the insects, plants, and animals that you include. Your drawing must include: plants, insects, and animals as well as water, light and nutrients. When you're finished, you'll use it to teach your parent or teacher and demonstrate what you've learned.
